Wed, 05 Dec 2018 01:51:00 GMT [CLU-IN | Strategies & Initiatives > Green Remediation Focus - Biomining is a technique of extracting metals from ores and other solid materials typically using prokaryotes or fungi. These organisms secrete different organic compounds that chelate metals from the environment and bring it back to the cell where they are typically used to coordinate electrons. It was discovered in the mid 1900s that microorganisms use metals in the cell.](#)
